

RUSHIKESH KANFADE (AI & BACKEND ENGINEER)

✉ rushikeshkanfade123@gmail.com | [in linkedin.com/in/rushikeshkanfade](https://www.linkedin.com/in/rushikeshkanfade) | github.com/rushikesh2302

+91 9527504854 | 📍 Bengaluru, Karnataka

Profile Summary

AI & Backend Engineer working with TypeScript, Python and Rust to build retrieval-driven AI systems, low-latency data pipelines, and distributed backend services. Interested in semantic retrieval, agent workflows, and systems that process and interact with large-scale multimodal data.

Skills Summary

Languages: TypeScript, Rust, Python

Generative AI & LLM Systems: RAG Pipelines, AI Agents, Multi-Modal AI Systems, Fine-Tuning, Vector Databases

AI Frameworks & Tooling: LangChain, Hugging Face, OpenAI API, PyTorch

Backend Technologies: Node.js, Express.js, PostgreSQL, Redis

Frameworks/Libraries: Next.js, Zustand, Tailwind CSS, Prisma

Developer Tools: GitHub, Docker, CI/CD, AWS, VS Code, Postman

Core Skills: Communication, System Design, Distributed Systems, Strategic Planning

Work Experience (Projects)

OmniMind || Rust, Python, TypeScript, Node.js, FastAPI, Redis, Qdrant, Next.js, Turborepo May 2026 - Present

Architecting OmniMind, a distributed multi-modal AI system that transforms videos, PDFs, DOCX, and spreadsheets into searchable, AI-understandable knowledge using semantic retrieval and intelligent media pipelines.

- Designed a hybrid AI architecture combining Rust workers, Python AI services, and Node.js orchestration to process, index, and retrieve information across structured and unstructured content.
- Built advanced RAG pipelines with vector embeddings and Qdrant, enabling contextual question answering, semantic search, and cross-file retrieval across documents and video transcripts.
- Engineered AI-powered video intelligence features including timestamp-aware semantic retrieval, important moment detection, and automatic clip generation using FFmpeg and high-performance Rust processing pipelines.
- Developed distributed asynchronous workflows using Redis queues and concurrent worker systems for scalable media processing, transcription, embedding generation, and AI indexing.

OSSBeat | Node.js, TypeScript, PostgreSQL, Prisma, Next.js, Redis, Turborepo Nov 2025 - May 2026

Introduced OSSBeat, a developer-focused platform that simplifies discovering, analyzing, and selecting GitHub repositories for learning, collaboration, and open-source contributions.

- Built a backend-focused platform to discover and analyze GitHub repositories using the GitHub REST API, improving repository discovery efficiency by ~50%.
- Enhanced a scalable backend with **PostgreSQL + Prisma**, implementing pagination, indexing, and Redis caching to reduce response times by ~40%.
- Secured APIs with JWT authentication, API keys, and rate limiting using a clean **Controller–Service–Repository** architecture in a **monorepo** setup.

AI Website Generator | React, TypeScript, WebContainer, Gemini AI Jan 2025 - May 2025

A business management application created to manage invoicing, track sales leads, and monitor revenue performance. Supports operational reporting, lead tracking, and financial visibility for business teams.

- Composed an **AI-powered** platform that converts natural language into fully functional code, reducing manual coding time by up to 70%.
- Crafted a responsive user interface, improving accessibility across devices and reducing layout issues across screen sizes by ~40%.

Education

Anuradha Engineering College, Chikhli, SGBA University 2021 - 2025

Bachelor of Engineering in Information Technology – 7.28 CGPA

Sant Gadge Baba Amravati University 2019 - 2020

Higher Secondary Education – 76.10
